

WINDOWS

HOW TO INSTALL

every step is a picture

anything you must type is in a box you can copy

1

Open the ZIP and press Extract all

The file you downloaded from Gumroad

VoiceClone-v1.2.0-windows.zip

New Cut Copy Paste

Extract all

click this

VoiceClone

File folder

Windows asks where to put it - just press Extract. Wait a few seconds.

2

Open the folder it made

Inside you will find one folder called VoiceClone

VoiceClone-v1.2.0-windows

VoiceClone

double-click

File folder

Double-click VoiceClone to go inside.

3

Double-click START VoiceClone

This is the only file you ever need to open

VoiceClone

App	File folder
Guide	File folder
Output	File folder
 START VoiceClone	Windows Batch File
 STOP VoiceClone	Windows Batch File

double-click this

If Windows shows a blue 'protected your PC' box: click More info, then Run anyway.

4

A black window opens - let it finish

First time only: about 10 to 30 minutes. Leave it alone.

VoiceClone

```
VoiceClone - first run setup
-----
This happens ONCE: the app installs its own private parts.
It needs internet and takes 10 to 30 minutes. After this,
VoiceClone starts in seconds every time.

[1/4] Downloading the app runtime from python.org ...
% Total    % Received   Average Speed   Time    Current
 46  10.6M      46   4.9M      1.97M    00:05    2.48M

[2/4] Installing pip ...
```

Numbers moving = it is working. Do NOT close this window while it downloads.

5

Copy the address into your browser

When you see this line, the app is ready

```
VoiceClone
[4/4] Setup finished.

VoiceClone -> http://127.0.0.1:8770/studio copy this
(the voice models take a minute to load the first time)

Keep this window open while you use the app.
```

Your browser

http://127.0.0.1:8770/studio

Paste it in the address bar and press Enter. VoiceClone opens.

COPY THIS ADDRESS INTO YOUR BROWSER

http://127.0.0.1:8770/studio

It is also printed in the black window. Nothing is online - this is your own computer.

6

To stop - and to start again

Two easy things to remember

TO STOP

Press the power button

at the top of the page

or just close the black window.

TO START AGAIN

Double-click

START VoiceClone

It is already installed - it
opens in a few seconds.

That is everything. You never repeat the setup.

IN ONE LINE

Unzip, double-click START VoiceClone, wait, open the address it shows.
Next time it starts in seconds. Your audio is saved in the Output folder.

IF SOMETHING GOES WRONG

Setup stopped: run START VoiceClone again, it carries on from where it stopped.
Blue 'Windows protected your PC' box: click More info, then Run anyway.
Put the folder somewhere short like C:\VoiceClone - very deep folders break setup.
Anything else: reply to your receipt email. I answer personally.

HONEST LIMITS

English only. It cannot sing. Flat reading in means a flat voice out.
An NVIDIA card is fast; a plain office PC works, just slower.
Only clone voices you have the right to clone.
Everything runs on your computer. Nothing is uploaded, ever.
